TRANSFORMING VULNERABILITY AND RISK MANAGEMENT

CYBERSECURITY PRODUCTS, SOLUTIONS AND SERVICES

## COMMERCIAL

Rampant managed security services and unique software solutions let you offload resource-intensive security operations from your over-burdened IT staff to our certified cybersecurity experts, so you can focus on your business. Our team of ethical hackers, security engineers, developers and security researchers enable organizations to transform the way they manage their information security and compliance programs. With our proprietary technologies and processes, we are able to offer high-end professional cybersecurity services at prices that any organization can afford.

### MANAGED SECURITY ASSESSMENTS

Rampant managed external security assessments incorporate a blend of open source intelligence, vulnerability scanning, and manual penetration testing to give you the complete picture of your organization's security posture from the internet. With options ranging from daily scanning to monthly or quarterly assessments, we identify network, operating system, web application and web server vulnerabilities to ensure your organization is able to respond quickly as new vulnerabilities are discovered and attackers change their techniques. Whether you want a point in time assessment or to continuously monitor your system for weaknesses and vulnerabilities, we have you covered.

### ENTERPRISE SECURITY ASSESSMENTS

Today, you can no longer rely on just a hardened perimeter to keep your organization secure. Your internal network will be compromised at some point, and when it is, your internal security controls must be able to detect the attack, minimize the damage, and enable you to rapidly investigate the incident so that mitigations can be put in place.

Rampant enterprise security assessments give you the complete picture of the risk your organization faces by assessing your system from both the inside and outside. We verify that all aspects of a security program are properly implemented, including technical controls, business policies, and administrative procedures to defend against modern day threats. A detailed remediation plan is provided to address all deficiencies and our team is available to support the implementation of all recommended solutions.

### MANAGED SECURITY AWARENESS TRAINING

The vast majority of network breaches begin with a successful phishing attack. Research has shown that the most effective defense against phishing and other social engineering attacks is a sound security awareness training program. However, not all security awareness programs are created equal, and many have proven to be completely ineffective against modern attacks.

Rampant's fully managed security awareness program blends simulated (but highly realistic) social engineering attacks, such as phishing emails and USB drops, with interactive and engaging computer-based training modules. Our curriculum is designed to ensure your organization remains vigilant and knowledgeable about the latest threats, while requiring minimal time on the part of your IT staff and employees. Our customers see a rapid reduction in their organization's susceptibility to social engineering and other online attacks, by over 90%.

### VULNERABILITY & RISK MANAGEMENT PLATFORM

## NUCLEUS

Rampant developed the Nucleus VRM platform to enable security teams to mitigate vulnerabilities up to 10 times faster than they can using current industry-standard vulnerability management processes. Nucleus seamlessly integrates into the center of your current workflow and actively automates the vulnerability management process. Nucleus aggregates, normalizes, correlates, and enriches the data from all vulnerability scanners and security awareness training platforms in use throughout your enterprise. This aggregation automates all the administrative work normally associated with determining which vulnerabilities to fix first, allowing organizations to simultaneously increase scanning coverage while reducing overhead. Then, through its powerful rule-based engine, Nucleus automates notifications and ticketing from one central location, tasking the tools your team already uses, such as JIRA, Slack, ServiceNow, and PagerDuty, enabling teams to fix issues immediately as they are found rather than after hours of analysis.

## FEDERAL

Rampant provides U.S. Government organizations and contractors with the cybersecurity services and software needed to satisfy their unique requirements as efficiently as possible. Our experience with a diverse range of federal government clients has enabled us to facilitate cross-pollination of ideas and deployment of unique security solutions across organizational boundaries. Rampant's ability to overcome security roadblocks, reduce risk to budget and schedule, and improve overall security posture makes us an excellent team member for projects of any size.

### SECURITY ENGINEERING & IA

Rampant federal security engineering services are fully adaptable to our customer's system and mission needs. Whether your program is in the early design phases or has been operational for years, our security engineers can integrate with your team and provide security support for all stages of the system lifecycle by:

- Developing and integrating technical security controls, features and solutions to satisfy NIST 800-53 and operational/mission security requirements
- Performing security testing, vulnerability assessments, penetration testing and blue/red team exercises
- Performing vulnerability remediation to include code fixes, system patching and security configuration hardening
- Documenting the system security design, features, and policy per ICD503 and DIACAP standards using organizational tools including XACTA and eMass
- Serving as or interfacing with SCAs, ISSMs, DAOs, ISSEs, and ISSOs
- Architecting and designing the system securely from conception and integrating with your development team to ensure security is ingrained throughout the development lifecycle

### DEVSECOPS

Rampant has fully embraced the "shift left" and provides cutting-edge operational security, software and system administration services to support devops practices. We work with your development team to integrate, automate and orchestrate the necessary security technologies throughout your system to ensure your security posture is maintained correctly and with minimal overhead. Our expertise in both security and software engineering makes our team ideal for devsecops tasks such as:

- Incorporating vulnerability assessments into software build processes
- Integrating security configuration into your infrastructure provisioning tools (e.g. puppet & chef)
- Instrumenting systems and applications for continuous security monitoring

### CYBERSECURITY SOLUTIONS

Rampant's blend of cybersecurity, software and systems engineering skills, combined with our deep experience with government systems enables us to provide innovative technical solutions to difficult cybersecurity problems facing the government today. We specialize in maximizing efficiency by automating repetitive security tasks that every government customer is facing. The result is cybersecurity tools and solutions that serve as force multipliers, saving our customers time and money. Rampant engineers have developed custom GOTS security solutions used by the DoD and IC for:

- Vulnerability and Risk Management
- Asset and Inventory Management
- System Hardening Automation

## FedBounty

Rampant offers a crowd-sourced vulnerability assessment (Bug Bounty) service, tailored for the U.S. Government, known as FedBounty. FedBounty was designed to satisfy the operational security needs of highly sensitive federal customers.

## WHY RAMPANT

Rampant has many years of experience providing service to organizations of all sizes, from small and midsize businesses (SMB), to very large enterprises including the Department of Defense (DoD) and Intelligence Community (IC). Our team has the education, experience and industry certifications necessary to ensure your organization is protected from modern threats and the never-ending stream of cyber-attacks that all organizations face. As a lean and agile small company, we are able to respond to your needs quickly, provide an unparalleled level of customer service, and offer some of the most competitive prices in the industry.
